Available now | Fractional or full-time | £600/day | Outside IR35 | London Hybrid/Remote

Harry Evans Software Ltd (17385844), £1m professional indemnity and public liability cover

Professional Profile

Senior full stack engineer specialising in TypeScript across the entire stack. I build new products from nothing to production, most recently architecting and shipping an entire marketplace platform single-handedly, and before that leading the engineering for an enterprise platform that launched on time and now carries over £5m of contract value a year. Five years building production software in London, four of them at a venture-backed marketplace delivering at pace in a scaled Agile team. Available now for fractional or full-time contract engagements.

Technical Expertise

Core — TypeScript, JavaScript, SQL, Node.js

Frontend — React, Next.js (App Router), React Query, Apollo Client, Tailwind, shadcn, CSS-in-JS (Chakra UI, Emotion, styled-components), design systems and token architecture

Backend & data — GraphQL (Yoga & Apollo Server), Prisma, PostgreSQL, REST, Hono, Express

Auth — Amazon Cognito, passwordless and magic-link flows, role-based access control, OAuth token lifecycles

Integrations & async — Stripe Connect, Salesforce webhook replica, Cal.com Platform, HMAC webhook verification, idempotent event handling, Kafka, SQS, Cloud Tasks, scheduled jobs

Infrastructure & delivery — AWS, GCP (Cloud Run, Cloud SQL, Cloud Tasks, Secret Manager), Terraform, Docker, GitHub Actions, Turborepo monorepos, structured logging

Testing — Jest, Vitest, TDD, integration testing

Also worked with — Python, Go

Experience

MiM — Technical Cofounder

London | January 2026 – Present

A marketplace connecting fashion stylists with clients, with a separate internal portal for platform operations. Sole engineer; architected and built the entire platform.

- Designed and shipped the full product solo - a Next.js App Router web app serving both stylists and clients, an internal operations portal, a GraphQL API, a webhooks service and a marketing site - in a Turborepo monorepo of 20 shared packages.
- Defined the Salesforce data contract the product needed, then consumed a webhook replica over GraphQL so organisers saw live lineup progress from the CRM.
- Enforced architectural boundaries with a custom ESLint rule that blocks web-only imports from shared packages.
- Implemented payments on Stripe Connect, including an idempotent payment-intent fulfilment path that handles duplicate webhook delivery and out-of-order events safely.
- Integrated Cal.com Platform for scheduling, managing user provisioning, rotating OAuth refresh tokens, and calendar connections.
- Built a standalone service for HMAC-verified webhook ingestion, asynchronous email dispatch through Cloud Tasks, and scheduled jobs for creator payouts and notification digests.
- Modelled and shipped the data layer in Prisma and PostgreSQL, covering services, staged client journeys, and payment state transitions.
- Owned all infrastructure via Terraform-provisioned GCP (Cloud Run, Cloud SQL, Secret Manager, Cloud Tasks) using Workload Identity Federation.

- Built CI/CD pipelines in GitHub Actions with automated build/test gating and zero-touch production deployment.

Together (formerly Feast It)

London | December 2021 – December 2025

Senior Full Stack Software Engineer (Feb 2025 – Dec 2025) | Full Stack Software Engineer (Dec 2022 – Feb 2025) | Junior Software Engineer (Feb 2022 – Dec 2022) | Associate Developer (Dec 2021 – Jan 2022)

Venture-backed events and catering marketplace. Progressed from a temporary internship to Senior Engineer over four years.

- Led the engineering for a new enterprise application, built from scratch to give the corporate clients and public events side of the business a dedicated platform of its own. It now carries contracts for more than 30 festivals and public events worth over £5m a year, and is still growing. Directed three to four engineers under the squad's lead engineer and launched on time in October 2025, four months from a standing start.
- Designed its GraphQL schema and multi-tenant permission model from scratch — each client's production team scoped to its own contract, with internal staff working across every account — behind a Next.js App Router front end with passwordless authentication on Amazon Cognito
- Built the bidirectional Salesforce integration: consuming platform events into our own database to surface in the application, and pushing supplier actions taken in the core marketplace back into Salesforce
- Part of the small team that delivered the largest rework of the platform's quoting system in company history.
- Served as de facto second in command of the Conversion squad, owning release velocity and representing engineering in company-wide forums.
- Delivered 60% above the engineering average on story points and ranked in the 90th percentile for peer reviews completed department-wide.
- Built internal npm libraries and template repositories to standardise service scaffolding, testing, and deployment across squads.
- Scoped and delivered the venues marketplace as a Junior, opening a new revenue category for the business.
- Worked daily across an event-driven stack featuring React, TypeScript, Node.js, PostgreSQL, Kafka, and SQS.

Earlier Career

Soho House & Co | London & Oxfordshire (Jul 2018 – Jun 2021)

- Managed a department of 38 at Soho Farmhouse, a 130-bed hotel operating at 96% occupancy.
- Acted as duty manager across the site, overseeing operations and guest relations.

Education

General Assembly, London | Software Engineering Immersive (2021)

University of the West of England, Bristol | BA (Hons) Business Studies & Management (2010 – 2014)

Interests

- **Athletics:** Trail and road running.
- **Outdoor Sports:** Ski touring and backcountry skiing.
- **Cycling:** Long-distance cycling, including a solo trip from London to Santander (2017).
